In addition, applicant notes with respect to any information that is not in

English language as follows:

Reference A) describes a method for start-up of a facility with a control system having regulation and control modules that supply control values for regulating and controlling the facility. A central control unit is physically separate from the facility. In case of malfunction of a regulation and control module during transfer to the control values to the central control unit, the control values are replaced in such a way that the facility remains operational.

Reference B) describes a control unit for discrete electrical consumer load, e.g. electric drive motor or electrohydraulic drive unit. The control unit contains a load control unit (4), switching the consumer on or off and connected with an energy source (5) or network, according to a program stored in a control device (6). This control unit is provided with a microprocessor for changing the program if required. The control device can exchange information with an MSR unit (7), having measuring, control and regulation program, its sensor communications unit (8) and its diagnostic unit (9).

The above-identified application discloses and claims an invention patentable over this prior art. Entry of the references above set forth into the file of the above application is believed to be in order and is respectfully requested.

Respectfully submitted
